Professional Summary

Java backend engineer with nearly two years of experience building and supporting backend automation for international telecom operations. Built **Clearance**, a permission-aware **RAG** assistant using **Python**, **FastAPI**, **LangGraph**, **PostgreSQL**, and **Qdrant**. **Available for immediate joining.**

Skills

Programming: Python, Java, OOPS, SQL
AI / LLM Application Development: LLM APIs, Prompt engineering, Structured outputs with Pydantic, Tool calling, AI agents, LangGraph, LangChain
RAG: Document loading and chunking, Embeddings, Vector databases (Qdrant), Retrieval, Metadata filtering, RAG evaluation
Backend Development: REST APIs, HTTP, FastAPI, Request validation, CRUD
Containers & Deployment: Docker, Docker Hub
AI Quality & Safety: Evaluation datasets, Observability, Guardrails, Tool-permission controls
Tools: Maven, Git, DBeaver, Jira, Postman, JSON

Experience

Amdocs **Pune, India**
Associate Software Engineer *Nov 2024 – Jul 2026*
Key accounts: Vodafone (Netherlands, Ireland, Italy, Ukraine), Vivo, PLDT, VEON (Kar-Tel, Unitel), and Azercell.

- Automated bulk telecom operations across **9 international accounts** by developing and maintaining Java 17 backend modules for reliable, high-volume batch processing.
- Delivered **30+ new and enhanced backend modules** from Jira requirements, integrating external systems via REST APIs and adding validation logic that reduced rework and production defects.
- Processed batch inputs of up to **200 MB per run** through configurable pipelines supporting scheduled and on-demand operations with high reliability.
- Achieved **zero rollback incidents** across multiple production deployment cycles by releasing Java applications with Maven, authoring deployment runbooks, and providing on-call production support.
- Resolved **10+ production incidents** through log analysis, debugging, and targeted fixes, improving overall release stability.
- Served as technical focal point for modules across **all 9 accounts** and sole technical point of contact for **VFIE and PLDT**; collaborated with client and business teams to troubleshoot issues and demonstrate features.
- Contributed to the team's **Cursor DevPack (AI coding assistant)** initiative, helping automate development workflows through documented rules and integrations with Jira and GitLab.

Projects

Clearance – Permission-Aware Company Knowledge Assistant
github.com/atandritC/Clearance | clearance-theta-three.vercel.app
Python, FastAPI, LangGraph, Groq, Pydantic, PostgreSQL, Qdrant, FastEmbed, Docker

- Built a **retrieval-augmented generation (RAG)** assistant that answers questions from company knowledge documents with citations, using LangGraph, FastAPI, Groq, PostgreSQL, and Qdrant.
- Enforced **permission-aware retrieval** using server-verified identity, department rules, and document-version grants so the LLM receives only authorized evidence; validated citations and supported abstention when evidence was insufficient.
- Evaluated retrieval and access boundaries on synthetic questions, measuring **0.875 document precision@5** and **1.000 recall@5** across 7 cases, with **0 leakage cases among 7 tested** (one grant-dependent case skipped); containerized and deployed the demo.

Education

SRM Institute of Science and Technology (SRMIST) Aug 2020 – May 2024
B.Tech. in Computer Science with Specialization in Information Technology
